

Amendment to the claims:

1. (Canceled)
2. (Canceled)
3. (Canceled)
4. (Canceled)
5. (New) A rotary tool for resurfacing two surfaces simultaneously, said surfaces including a generally flat major surface and an adjacent overlying minor surface perpendicularly oriented with respect to said major surface, said tool comprising:

a motor driven shaft;

a rotating blade holder fixedly attached to said shaft, said holder carrying blades which simultaneously engage said major and minor surfaces;

a rigid guard housing partially enclosing said holder; and

means for moving said housing with respect to said major and minor surfaces while said holder remains fixed to thereby effect adjustment of the depth of cut of said tool relative to said surfaces.
6. (New) The rotary tool of claim 5 wherein said means for moving comprises first and second adjusting screws.
7. (New) The rotary tool of claim 6 wherein said housing has two openings, a first opening through which the blades extend to engage said major surface and a second opening through which said blades extend to engage said minor surface, said first adjusting screw operating to move the housing up and down

with respect to said holder and said major surface, the second adjusting screw operating to move the housing toward and away from said minor surface.

8. (New) The rotary tool of Claim 7 wherein said second adjusting screw extends externally of said housing and rides on said minor surface during operation of the tool.
9. (New) The rotary tool of Claim 8 further including a support plate fixedly mounted to said tool external to said housing, said first adjusting screw operating when turned to move said housing toward or away from said plate and major surface relative to said holder.
